NEW TIMES, NEW MATERIALS

ANTI-BACTERIAL

Antibacterial material specially processed to inhibit and prevent bacterial growth, due to the incorporation of permanent static microbial agents, which are highly effective in the control against bacterial contamination.

LIMESTONE CEMENT

Llimestone cement is a binder formed by the mixture of natural materials, mainly ground limestone and water, resulting in a material of great consistency and durability.

RPET / RECYCLED PET

RPET or recycled PET is a material made from the reuse of PET, a kind of plastic present, mainly in the manufacture of bottles and other packaging for drinks. Through industrial processes, PET waste is 100% recycled, resulting in rPET, whose carbon footprint (CO_2 emissions into the atmosphere) is drastically reduced. In this way, a simple plastic bottle becomes a resistant material with a multitude of applications and functionalities. This is, at the same time, a recycled and recyclable compound.

PLA (POLYLACTIC ACID)

PLA (Polylactic Acid) is manufactured from 100% natural resources such as corn starch, yucca or sugar cane, being degradable and in our products, it becomes 100% compostable at the end of its lifespan, avoiding the generation of toxic waste. In addition, its versatility and different textures makes it a suitable compound for the elaboration of diverse articles, from bags to bottles, reducing considerably the use of energy during its manufacturing process.

WHEAT STRAW

Wheat straw is obtained from organic waste of the remains of the wheat harvest. Through its reuse, it contributes to the reduction of the use of plastics in a remarkable way, resulting in durable, versatile and resistant compounds, which can be applied in the elaboration of infinite products.

BAMBOO FIBRE

Bamboo fibre is obtained from the organic filaments of this plant, characterized by its rapid growth and its wide ecological connotations. The inclusion of bamboo fiber (FIBRE) in various compounds creates new and resistant materials, becoming a sustainable alternative to the traditional highly polluting plastics.

ORGANIC COTTON

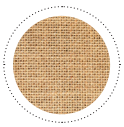
Organic cotton, the cotton of our ancestors, grown using sustainable methods with low impact on the environment. The non-use of insecticides, fertilizers or other chemicals in the yarn and production processes results in a comfortable fabric, 100% plant-derived and hypoallergenic, in a natural weave that claims traditional agriculture.

RECYCLED COTTON

Cotton waste from manufacturing processes, together with that from products that have reached the end of their lifespan, takes on a new life. A question arises: Does cotton recovery result in a quality fabric? The answer is YES, preserving natural resources and reducing the amount of waste generated. In addition, regenerated cotton keeps the properties of soft touch.

CORK

Cork is considered an excellent insulator, flexible, which regenerates naturally around the trunk of the trees from which it is extracted, mainly from the oak tree. The processes of cork extraction have a minimum impact on the environment, also standing out for being one of the most durable and resistant organic materials.



YUTE NATURAL

Natural jute stands out among sustainable materials because the manufacturing processes have a low impact on the environment, together with its rapid regeneration. The natural aspect, together with its resistance and durability, makes of it a sustainable material of reference.

BAMBOO

The natural bamboo plant is characterised by its great resistance, flexibility and above all, by its rapid growth and regeneration, a characteristic that makes it a sustainable material and an excellent alternative to the use of traditional wood, with a multitude of applications. It is naturally resistant to plagues, so it does not require the use of pesticides.

RECYCLED PAPER

The remains of paper from the manufacturing processes, together with the paper that has reached the end of its lifespan, become an ecological and sustainable material. During the paper recycling process, the amount of virgin fibres used is drastically reduced, contributing to the conservation of forests. In addition, the amount of energy used in the process of recycled paper is considerably reduced, compared to the energy required for the production of traditional white paper.

RPET

The fabric used in the manufacturing process of these items is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these products is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these products is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

The fabric used in the manufacturing process of these backpacks is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estas mochilas está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these bottles is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos bidones está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of this product is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de este producto está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these products is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these bags is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estas bolsas está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these products is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these products is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos están fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

ANTIBACTERIAL LINE

What are the antibacterians aditive used in the products?

A major source of infections for humans is bacterial contamination. Under certain environmental conditions, bacteria are capable of proliferating exponentially, forming large colonies and producing unhealthy situations for humans.

To ensure a hygienic environment it is important to control microbial growth. That is why nowadays products with antibacterial treatments are increasingly in demand, aimed at environments in which hygiene is particularly important: in public environments such as transport, in the field of education, or for the personal use as articles of daily use, are the areas where they begin to have an increasing relevance.

Products with antibacterial treatments are capable of drastically reducing the bacterial loads present on the surfaces of the materials, thanks to the incorporation of static permanent microbial agents, highly effective in inhibiting and preventing bacterial contamination.

The ISO 22196 and ISO 20743 standards determine antibacterial activity on plastic materials and non-porous surfaces and on textile products, respectively. These analyzes allow to know the effectiveness of microbial inhibition that the additives have on the treated objects through a quantitative evaluation.

RPET

The fabric used in the manufacturing process of these products is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.

RPET

The fabric used in the manufacturing process of these products is made of recycled plastic (RPET). Like this, the emission of plastic residues to our planet and the consumption of energy is drastically reduced, resulting in a much more eco-friendly process.

El material de estos productos está fabricado con plástico reciclado (RPET), que, además de ayudar en la disminución de residuos plásticos en el planeta, utiliza menos energía en el proceso de fabricación, haciendo que sea mucho menos dañino para el medio ambiente.
